Olorunmaiye Peter

Data Analyst

Abuja, Nigeria (UTC+1), open to remote roles | ayanfepolorunmaiye@gmail.com | github.com/AyanfeDara | ayanfedara.github.io

PROFILE

Data analyst with a Master in Data Science Management (Rome Business School, average 29/30) and a BSc in Physics. Works in Python, R, SQL and Power BI, from cleaning and modelling data to building dashboards for decision-makers. Hands-on background in sensor data collection, traffic signal systems and solar energy projects. Seeking a remote analyst role in energy, mobility or operations analytics.

TECHNICAL SKILLS

Analysis and statistics	linear regression, probability, statistical inference and modelling, data wrangling
Programming	Python (Jupyter), R, SQL (Microsoft SQL Server), MATLAB
BI and reporting	Power BI, Excel
Data platforms	data warehouses, data lakes
Machine learning	supervised learning fundamentals, TensorFlow (introductory)
Sensor data	BMP180 sensors, ESP8266 data logging

EDUCATION

Master in Data Science Management, Rome Business School (Lagos, Nigeria) Apr 2025 to Apr 2026, awarded May 2026

Average grade 29/30 (ECTS grade A), 60 ECTS. Capstone project graded 30/30.

Coursework: statistics, linear regression, probability, inference and modelling, machine learning, Python, R, SQL Server, data warehousing, Power BI, data ethics.

BSc Physics, Second Class Honours (Lower Division), University of Ilorin Aug 2021

Coursework: computational physics, statistical physics, mathematical physics, electronics, energy physics.

PROJECTS

Telecom Customer Churn Analysis Oct 2026

Python, pandas, scikit-learn, SciPy | github.com/AyanfeDara/telco-churn-analysis

- Analysed 7,043 telecom customers in Python; used chi-square tests to show month-to-month customers churn 15 times as often as two-year customers (42.7% against 2.8%).
- Built and compared a logistic regression and a random forest model (ROC AUC 0.85 on unseen test data) to rank customers by churn risk.
- Showed that targeting the riskiest 20% of customers reaches 50% of leavers and 55% of revenue at risk, against 20% with random selection, and recommended a tested retention offer.

Africa Electricity Dashboard Oct 2026

Power BI, Power Query, DAX | github.com/AyanfeDara/africa-electricity-dashboard

- Built a three-page Power BI report on electricity supply in 54 African countries (2000 to 2024), cleaning the data in Power Query and modelling it as a star schema with DAX measures.
- Showed that generation grew 119% but population grew 83%, so electricity per person rose only 20% (534 to 639 kWh).
- Compared Nigeria with six peers: lowest electricity per person (161 kWh in 2024), and a renewable share that fell from 38% to 25% as fossil generation tripled.

E-commerce Sales and Delivery Analysis Oct 2026

PostgreSQL, SQL, Python | github.com/AyanfeDara/olist-sales-analysis

- Analysed 99,441 orders across 9 linked tables in PostgreSQL, using CTEs and window functions, to explain 141% year-on-year revenue growth.
- Found that orders more than a week late received a 1-star review 70% of the time, and that late orders (6.7% of deliveries) produced 37% of all 1-star reviews.
- Identified the North-east as the weakest delivery region (14 to 21% late against 4.5% in São Paulo) and recommended where to focus logistics fixes.

Drone-Based Meteorological Data Logger (BSc thesis) Oct 2019 to Aug 2021

ESP8266, BMP180, JavaScript, HTML, CSS

- Built a quadcopter carrying a BMP180 sensor to record temperature and pressure, and derived altitude from the pressure readings.
- Logged readings through an ESP8266 module and built a web interface for viewing the data in real time.
- Awarded Project of the Year by the National Association of Physics Students, University of Ilorin chapter (2021).

EXPERIENCE

Treasurer, NYSC NEMA Community Development Group, Bayelsa State Aug 2022 to Oct 2022

- Managed the group's funds and led disaster-preparedness sessions on flooding, oil spills and fire in schools and communities, reaching over 1,000 people.

Technical Support Intern, Urban Motions, Abuja Jun 2020 to Feb 2021

- Supported the design and installation of solar energy projects, including energy audits and on-site assessments for new installations.
- Assisted in developing traffic light control systems through embedded programming, and documented their specifications and operating procedures.

Undergraduate Tutor, University of Ilorin Aug 2019 to Jul 2021

- Taught quantum mechanics, electromagnetic theory, solid-state physics and computational physics (MATLAB) to over 50 third- and final-year students.
- Designed and delivered English and mathematics preparation for Post-UTME admission candidates as a volunteer.

Student Intern (SIWES), Traffic Management Department, FCTA, Abuja Aug 2019 to Nov 2019

- Monitored traffic signals in real time from the traffic management centre and helped prepare traffic analysis reports on patterns and congestion.
- Modified traffic flow designs in AutoCAD and supported routine maintenance of signal systems.

CERTIFICATIONS, AWARDS AND LANGUAGES

- Business Leadership Development Programme (executive training), Rome Business School, Mar 2025
- Certificate of National Service, NYSC, 2022; Certificate of Honour, NEMA CDS Group, 2022
- Writer of the Year, National Association of Physics Students, University of Ilorin chapter, 2021
- Languages: English (fluent)
